

Why choose Hard Disk Sentinel?

- **Economic:** Hard Disk Sentinel has a one-time license fee which grants lifetime license with lifetime free updates. There is no annual subscription/update/renewal fees.
- Hard Disk Sentinel has **highest unique compatibility, features, functions** and with hard disks, SSDs, SSHDs (hybrid drives), RAID controllers, internal / external devices / disk enclosures / port multipliers / backplanes / adapters / docking stations with various connections/interfaces (including both IDE/PATA/SATA/SCSI/SAS/USB).
- Alone on the market, Hard Disk Sentinel and its support offers all possible ways to detect and report hard disk status in all possible cases, even **compatible with all major RAID controllers**. If the use of specific driver version is required, it is available easily from the Driver Zone page (<http://www.hdsentinel.com/driverzone.php>)
In contrast, most other tools have no support for most RAID controllers / enclosures / special devices, for example the devices supported by Hard Disk Sentinel as listed on the Hardware Compatibility (<http://www.hdsentinel.com/compatibility.php>) pages, for example: http://www.hdsentinel.com/compatibility_disk_controllers.php
- Only Hard Disk Sentinel has today's **most sensitive health detection and error-reporting** method. Hard Disk Sentinel verifies the error counters and actual statistical information reported by the hard disks and SSDs, to determine and report problems accurately long before they may lead to data loss or failure
Please check www.hdsentinel.com/smart for more information about how Hard Disk Sentinel verifies and interprets self-monitoring information. This gives a very high success ratio in both displaying real hard disk problems – and also to eliminate false positives.
- Hard Disk Sentinel has **flexible ways to monitor, diagnose, report status** on the actual computer or remotely, over the network. Hard Disk Sentinel offers numerous ways for integration, for example by offering detected data for other third party software / monitoring solutions (eg. Nagios).
Several add-ons / extensions available on <http://www.hdsentinel.com/add-ons.php> page.

- Alone on the market, Hard Disk Sentinel offers way to **adjust or correct the detected information** if required, for example to adjust the detected temperature (if the sensor is not accurate) and/or clear problems related to past and corrected, for example by replaced cables / power supply.
- Hard Disk Sentinel has **highest possible operating system compatibility**: supports all Windows Oses from older (even Windows 98/NT4/2000/XP) to newer systems like Windows 7/8/10/Vista/Server 2003/2008.
As Hard Disk Sentinel **does not require any third party libraries** or components like .NET, Java runtime, C/C++ redistributable or so, it is ideal for installation and use, even immediately after clean system installation.
In addition to the Windows versions, Hard Disk Sentinel has bootable DOS and Linux versions to check hard disk status even if the system is un-bootable and/or having Linux system only.
- www.hdsentinel.com website offers **extensive information and knowledge base** about hard disks, devices, diagnostics, typical errors and possible ways to avoid, diagnose, fix them by Hard Disk Sentinel software and in general.
